

FOOD SAFETY INNOVATION

2026

[CFS BRANDS]

Innovation at the service of food safety

ARAVEN is an international company engaged in the design, manufacture, marketing and sale of equipment for food service professionals.

Ever since 1976 we have been developing versatile, convenient, easy-to-use work tools that provide full food hygiene guarantees and help catering professionals to comply with the regulations and perform their daily work in the kitchen.

We offer assessment and training on products, conditions of use and regulatory compliance. Our team of professionals guarantee personalized service and attention worldwide.

ARAVEN collaborates with prestigious culinary schools, associations and renowned national and international chefs. Our Innovation Department works in close contact with professionals to discover the needs that arise in their daily work and develop new products that adapt to them. We also contribute to the training of future chefs and to equipping their kitchens via our support plan for the hospitality sector.

Our aim is to develop our customers' business and the industry, ensuring efficiency in kitchens and maximum food quality during all of its processes.

Innovation

ARAVEN is committed to innovation: it is at the core of value creation. We work constantly to excel in what we do and to help build the industry by developing products that generate greater value for our customers and end users. Our products incorporate all the latest advances in materials, production processes and manufacturing systems.

Products developed by and for chefs. **Our goal is to generate new concepts that provide top functionality for hospitality professionals.** We partner up with expert food safety advisers and with chefs from all over the world who share their experience and knowledge to ensure that the design of our products is aligned with the most demanding needs and tasks. Together with our research into food safety, our new product developments are based on the comments passed on by kitchen professionals and our in situ observations of their processes.

ARAVEN seeks to offer professionals unique products, placing users at the core of our developments, with solutions that guarantee the preservation and handling of food, compliance with food hygiene regulations and operational excellence.

1. How to optimise space?
2. How to speed up work in the kitchen?
3. How to comply with health regulations?
4. How to offer something unique that helps professionals?

If you are a food service professional we want to simplify your daily work in the kitchen with easy-to-use, convenient, versatile tools that fully guarantee food hygiene. We provide products that help to comply with regulations and to carry out daily work with total safety and confidence.

We have patents and registered products in more than 25 countries that protect our most innovative developments.

What are the benefits of our products for professionals at each phase of food management?

ARAVEN focuses all of its efforts on innovating in food preservation and handling processes, which are the most demanding areas in compliance with food safety regulations.

Storage and preservation

ARAVEN pioneered the incorporation of a permanent label and ColorClip system in its airtight containers to identify the food to be stored and to prevent cross contamination. ARAVEN's airtight containers provide full food hygiene guarantees for preserving foodstuffs. They reduce microbial loads and oxidation of food, prolonging its useful life and preserving the optimal organoleptic properties of products (colour, smell, taste, texture ...). Ingredient bins are ideal for optimal storage and correct preservation of products in different temperature conditions.

Handling and preparation

ARAVEN's products help prevent, reduce or eliminate potential hazards at different stages of food preparation and handling.

Service and display

ARAVEN has an extensive range of products for serving and displaying food, which have been carefully designed with functionality in mind and to respond to the needs of both serving and kitchen staff.

Transport

ARAVEN preserves food at the correct temperature during transport, maintaining the cold chain to prevent the growth and multiplication of microorganisms that could affect food quality and safety.

Cleaning

ARAVEN's waste bins are essential partners in implementing HACCP systems in cleaning processes.

Sustainability and commitment to the future

All of us at ARAVEN are committed to sustainability as the pathway to the future.

Our basic principles are:

- 1. To comply with the established requirements** in all the work we carry out, and coordinate them with those of our customers and suppliers.
- 2. To prevent pollution and the impact on the environment** by correctly managing all aspects arising from our processes and activities.
- 3. To minimise consumption and the generation of emissions and waste** in production, management and recycling processes.
- 4. To promote and further our environmental** commitment among our suppliers, to engage them in it.
- 5. To seek the continuous improvement of our current activities thus ensuring the least environmental impact possible.**
- 6. To proactively involve all Company personnel** in fulfilling the above points and in managing the environmental value of our activities.

ARAVEN's Environmental Policy is everyone's responsibility, it has General Management's total backing, and its fulfilment is considered to be a top priority.

This concept of responsibility does not just include the environment but also core social and economic issues. At ARAVEN we consider **Sustainability to be a mandatory project**. A commitment to our planet, to the current society and to the future generations, which as citizens of the world we must accept. This is a strategic project that must become our standard way of working.

Respect for the environment is an essential attribute of our innovation process. ARAVEN seeks to provide durable products made with materials and processes that are efficient and environment-friendly.

The 3Rs Rule

Reduce

At the design phase our studies determine the ideal thickness of parts in order to use the minimum material to produce the part without adversely affecting its quality or functionality. We analyse the environmental effects of materials and whether they can be replaced by "greener" solutions. We examine the whole production process to minimise impacts by making processes more efficient and reducing consumption.

Reuse

ARAVEN does not develop disposable or so-called "single-use" products. All ARAVEN's articles are designed to have a long useful life in conditions of intensive use, in professional environments. We promote the use of reusable products in all food service processes and carry out awareness-raising campaigns among professionals.

Recycle

All **ARAVEN Food Service products are made with recyclable materials**. We try to manufacture products in just one material or, if this is not possible, we try to **facilitate sorting of materials and components** of multi-material products to make recycling easier. We have a zero waste strategy, with the aim to reuse any remaining material from our production processes in our products or in those of our partners.

Sustainability in the kitchen

Our **solutions for preserving food help businesses to be more sustainable** by providing alternatives to the use of plastic film or aluminium foil and thereby reducing the waste generated. Our containers have an integrated label and do not need any other sticky labels to identify the food to be preserved.

Cost savings and continuous improvements can be achieved in all areas of food management, including food preservation. The quantities of food that are thrown away due to poor management not only generate a problem of sustainability but also entail a considerable additional cost for businesses.

Food Safety

Guaranteeing food safety and hygiene are a restaurant's top priority. Just like the food industry as a whole, the Horeca sector applies the Hazard Analysis and Critical Control Points (HACCP) principles as a way of managing food risks and innocuity.

Food safety does not only depend on the state of the food and the type of process that it is subjected to. The materials that food comes into contact with are also very important. ARAVEN products comply and help to comply with all the required regulations regarding food hygiene. We can guarantee food safety in all food preparation processes up-to service, providing best practice and hygiene are observed.

ARAVEN pays particular attention to all hygiene and health regulations, guaranteeing "peace of mind" for our customers.

Health Authorities check that the products used in catering establishments comply with regulations.

Manufacturers must certify to their customers that they comply with regulations so that this certification can also be applied to the catering establishments.

- | | |
|-------------------------------|--------------------------------|
| 1. Health Authorities | 4. Manufacturers |
| 2. Catering establishments | 5. Catering distributors |
| 3. Requirement for compliance | 6. Certification of compliance |

Food Safety Regulations are our work guide and source of inspiration for developing new products.

ARAVEN's products, designed on the basis of the CODEX Alimentarius, help hospitality establishments to apply Correct Hygiene Practices to prevent, reduce or eliminate possible hazards during the different stages of food preparation, handling and preservation. These work tools have been designed to minimise the risk of food contamination. They are made of corrosion-resistant materials that are easy to clean and disinfect.

Their use, together with a hygienic environment and good practices, ensure food safety at all stages of the process, from receipt of the product to the moment it is served. In the HORECA sector, the following phases in food management and processing in the kitchen can be identified:

Certification

ARAVEN, S.L. has its Quality Management System certified under the ISO 9001:2015 standard.

Registered in the General Food Health Register of the Spanish Agency of Food Health and Nutrition. R.D. 191/2011. (R.G.S.A. 39.04328/Z).

Compliance with all European regulations regarding materials and objects intended for food contact. Technical-Health Regulations for plastic materials for food use: Reg. (EC) 1935/2004 Reg. (EC) 10/2011 Reg (EC) 1907/2006 (REACH).

All our plastic products are manufactured with 100% recyclable raw materials.

The company is affiliated to the Ecoembes Integrated Management System for compliance with regulations on packaging and packaging waste, Directive 94/62/EC and 2004/12/EC.

APPCC / HACCP

Hazard Analysis and Critical Control Points, is a systematic preventive process to guarantee food safety.

All equipment and utensils used in food storage and handling areas that come into contact with food products must be made from a material that does not transmit toxic substances, smells or flavours; is not absorbent; resists corrosion and withstands repeated cleaning and disinfection. Surfaces must be smooth and free from chips and cracks.

All of ARAVEN's products are dishwasher-safe and made with rounded corners for easy cleaning and without sharp corners or spaces where impurities can accumulate. What's more, features such as ColorClip and built-in traceability labels help maintain high food safety levels and ensure compliance with regulations and self-monitoring systems.

All of these products meet the highest food hygiene and safety standards (HACCP), which were devised in collaboration with consultants that are experts in the field.

NSF

The National Sanitation Foundation is an independent organization that carries out tests to certify compliance with established criteria in relation to design, construction and evaluation of the materials and performance tests. ARAVEN's products are NSF-certified and as such are included in the list of NSF products published on the organisation's website at www.nsf.org/Certified/Food/.

The NSF mark provides consumers, wholesalers and regulators with assurance that the products have undergone a rigorous analysis and meets all the requirements.

MIGRATION

Regulations on migration establish limits on the migration of substances in plastic materials and apply to plastics that are intended to come into contact with food.

ARAVEN complies with ALL Migration Regulations: Directive 2005/79/EU, Directive 2007/19/EU, Directive 2008/39/EU and Directive 2011/10/UE.

TRACEABILITY

Traceability refers to the ability to follow the route of food, or objects that are intended for contact with food, from production to consumption – covering all the steps of the supply chain. We supply tools for compliance with Traceability Regulations Reg (CE) 852/2004 and Reg(CE) 178/2002 in relation to food. The integrated labels on ARAVEN food containers, used together with HORECA marker pens, are the only integrated system that ensures correct hygiene practice and helps with compliance with these regulations.

ARAVEN incorporates identification systems in its products to comply with Regulation Reg (EC) 1935/2004 relating to utensils in contact with food.

GastroNorm sizes

The catering equipment industry uses standard-size products to ensure all equipment, appliances and containers adapt to each other in kitchens, cold chambers and display areas. The GastroNorm standard allows space to be optimised in the various preservation, handling and cooking circuits. This simplifies internal organisation in restaurants and ensures compatibility between different systems and equipment, such as work tables, transport equipment or display tables.

ARAVEN adopts standard GastroNorm measurements as the main norm for the sizes it uses for its products. EN 631.1 Standard of the European Committee for Standardisation.

We help you to select the size and capacity of GastroNorm food pans

Materials

Polypropylene PP

Transparency allows you to identify food.
A perfect balance of strength and weight, along with the sturdiness and thermal characteristics of this plastic, make it the most commonly used solution for preserving food among hospitality professionals.

High resistance to heat: 95°C. Good behaviour at low temperatures -40°C. Good balance between rigidity and toughness. Strength, hygiene, durability...

Dishwasher safe.

Resistant to chemicals and surface corrosion.

BPA Free products.

+95°C | +203°F
-40°C | -40°F

Polycarbonate PC

High impact resistance.
Very robust and durable. Optimal behaviour at very low temperatures and withstands high temperatures, including bain marie processes.
Maximum transparency allowing food and its state to be quickly seen.

Dishwasher-proof.

High dimensional stability.

Very low absorption of humidity.

Stability with regard to chemical agents, does not stain.

+99°C | +210°F
-40°C | -40°F

Acrylonitrile butadiene styrene ABS

High impact resistance.
Very robust and durable. Optimal behaviour at very low temperatures and mid-range temperatures. Maximum transparency allowing food and its state to be quickly seen.

Dishwasher-proof.

High dimensional stability.

Very low absorption of humidity.

Stability with regard to chemical agents, does not stain.

+80°C | +176°F
-40°C | -40°F

Polyethylene HDPE

White without colouring agents.

Good resistance to impact, high resistance to corrosion.
Good performance at freezing temperatures and prevents passage of moisture. Good dimensional stability without being a rigid material.

Dishwasher-proof.

BPA Free products.

+90°C | +194°F
-40°C | -40°F

Polyethylene LDPE

+90°C | +194°F
-40°C | -40°F

Translucent without colouring agents.

Very flexible. It is soft and elastic; it has a very high elastic limit and recovers its shape after deformation.
Good mechanical and optical properties.

Dishwasher-proof.
BPA Free products.

Silicone

+200°C | +392°F
-40°C | -40°F

It is a synthetic polymer used in different utensils, containers and moulds for the kitchen.

Does not leave residues.

No wear. No ageing.

Non corrosive. It does not oxidise like metal.

It does not deform; it recovers its usual state.

It does not break like glass.

It does not alter the taste of food. Does not leave a taste.

It does not act as a medium for bacterial growth. Innocuous.

Water repellent.

Do not use with sharp utensils.

Resistant to extreme temperatures.

Dishwasher-proof.

BPA Free products.

Acrylonitrile Estyrene SAN

+90°C | +194°F
-40°C | -40°F

A highly transparent material when not coloured, offering great visibility and gloss. Its appearance is enhanced when mixed with a colouring agent.

It is rigid but much more brittle than the other materials.

Dishwasher-proof.
BPA Free products.

Polystyrene PS

+90°C | +194°F
-40°C | -40°F

Material with an excellent appearance, gloss and surface finish.

Dishwasher-proof.
BPA Free products.

Other materials:

Expanded polypropylene:

+120°C | +248°F
-40°C | -40°F

Polyamide nylon:

+70°C | +158°F
-40°C | -40°F

Polymethylmethacrylate:

+70°C | +158°F
-40°C | -40°F

Aluminium:

+150°C | +302°F
-25°C | -13°F

Preservation

A good container for preserving food is an indispensable item in a kitchen; the properties of good food can deteriorate if not kept in the right container. The correct preservation of food must meet two objectives:

- 1.** Ensure optimum health-hygiene quality.
- 2.** Reduce the level of wastage due to food deterioration.

Correct preservation of protein-rich foods is essential for several reasons:

- It guarantees hygiene and food safety and the health of diners as well as compliance with regulations. It prevents

the risk of bacterial contamination, which in the case of proteins can be serious.

- It reduces wastage of this type of food that, in general, is the most expensive food kept in store in a kitchen.
- It guarantees the quality of preparations and the end result. It maintains all the organoleptic properties of the food (colour, taste, texture...) so that after preparation it is in perfect conditions for serving to customers.

Aspects such as optimization of space in food preservation, control of packing date, preparation or prepreparation, as well as food identification are key elements for implementing the HACCP system and managing it effectively.

In this aspect, ARAVEN provides tools such as:

Shelving made of non-porous materials that are not affected by damp: plastic and anodised aluminium. Shelves are perforated, to facilitate air circulation.

Containers with a large variety of capacities to adjust the size of the container to the usual amounts consumed.

Methods for placing foods correctly, according to their group and type and to avoid cross-contamination.

Containers with permanent traceability labels, so the origin of the food, preparation, expiry date, etc. can be recorded.

Systems that facilitate organised food rotation: first in, first out. Systems to separate exudates, for correct preservation of raw meat and fish.

Containers with lid to prevent cross contamination between different types of food. This system is more sustainable than using plastic film or aluminium foil. It also prevents foods from drying out or absorbing or giving off odours that could affect their quality.

ARAVEN's products incorporate elements aimed at operational excellence, making it easy to manage stored raw materials and ensure that foods maintain all of their organoleptic properties in optimal conditions.

Permanent IML label

Marking containers used for preserving and storing foods with all the necessary information to guarantee the traceability of all products.

ARAVEN's containers have a **permanent traceability label integrated** in the food pan so that its contents can be identified and information on their origin can be preserved. You can record the origin of the food, the type of product, preparation, preservation conditions, best-before date, etc.

The permanent label incorporated in ARAVEN's food containers is the **only integrated system that ensures correct hygiene practices**. It enables kitchen professionals to identify contents and keep track of information on the origin of food and to record information such as: where the food has come from, its preparation, best-before date, etc.

In food preservation it is crucial to keep track of packing dates and to correctly identify foods in order to implement HACCP systems and ensure efficient management. Better organisation means better control of raw materials, which in turn entails less waste and more cost savings.

Savings: No inconvenient and costly replacing of labels. No need to stick and tear off paper labels.

Easy and convenient to use: just jot down the details on the label, using the ARAVEN marker pen.

Hygiene: The integrated label does not leave any marks and comes out as new after each wash in the dishwasher.

FIFO system

Regardless of the preservation temperature (chilled, frozen or at room temperature) we recommend managing foods according to the FIFO - First in, First out system, in an orderly manner and separated in the right containers.

ARAVEN has containers with systems that help to ensure the orderly rotation of foods (FIFO).

This system allows the first food that enters your storeroom or cold chamber to be the first to be consumed, thus avoiding unwanted wastage.

ARAVEN's colorclips in red, yellow and green help you to class foods according to their order of coming IN and going OUT.

ColorClip

7 Colorclips that facilitate food management in the kitchen based on different criteria such as:

Classification by type of food: ARAVEN containers, thanks to their Colorclip identification system, help prevent cross-contamination, ensuring that the contents of a container are always the same type of food: poultry, red meat, vegetables/fruit or fish. Two new colours have been added to the identification system: white for dairy products and brown for processed meat and cold meats.

Fish

Poultry

Red meat

Prepared meat

Vegetables

Dairy

Anti-allergic

Classification by dates: 7 identifying Colorclips to organise the food prepared on each day of the week. Processed and cold meats.

Monday

Tuesday

Wednesday

Thursday

Friday

Saturday

Sunday

Classification by restaurant operations: Contents are quickly identified and accessed. Reducing the time it takes to supply workstations and prep tables. To help you in menu prepping and reducing response times.

Seven colours to identify raw materials for a particular menu. Example:

Classification by operational line and work areas by process: System for classifying and organising proteins in storage based on the date they were stored, processed, defrosted, etc.

PP Airtight containers

+95°C | +203°F
-40°C | -40°F

ARAVEN's airtight containers enable foods to be preserved with the maximum hygiene-food safety guarantees, preventing any harmful deterioration and protecting them from cross-contamination.

ARAVEN's containers, thanks to their airtight seal, prolong the useful life of food by up to 25%*.

Prolong the useful life of food:

1. Select the ARAVEN container in the GastroNorm size that best adapts to the volume of raw food to be preserved. The fuller the container the less oxygen there is inside.
2. When you close the container press the centre of the lid to remove part of the air inside. **Press the lid** in the centre and gradually close it in the direction in which the air is expelled. This way **the air inside is partially removed**, improving food preservation.

The lid has a groove which allows the air inside the container to be partially expelled, reducing food oxidation.

*Study conducted by the plant origin foods research group of the University of Zaragoza.

PP Airtight containers

Airtight: Double airtight seal for total protection of the food. The lid is made of LDPE, a more flexible material, which allows a better fit to the base.

Integrated label: The permanent label enables catering professionals to identify the contents and record information relating to its origin, thus contributing to compliance with Traceability Regulations Reg. (EC) 852/2004 and Reg. (EC) 178/2002 regarding food.

ColorClip: Colour coding to avoid cross-contamination. ARAVEN containers, thanks to their ColorClip identification, help to prevent cross-contamination, ensuring that the contents of the container are always of the same type: Poultry, red meat, vegetables/fruit or fish.

Measuring scale: Measuring scale and GastroNorm size indicator.

Easy to Open The container has a tab on the lid for easy opening.

GastroNorm sizes: Products designed and manufactured according to sizes and specifications established in EN 631.1 standard. Select the ARAVEN container in the GastroNorm size that best adapts to the volume of raw food to be preserved. The fuller the container the less oxygen there is inside.

Stackable with a lid and nestable when empty.

Easy to clean: Rounded edges: The special design avoids the accumulation of food remains and facilitates cleaning.

Basic Polypropylene Food Pans

Along with the surface printing on the piece and with the use of the ARAVEN Horeca Marker in order to write on this part of the container, we can identify the content, preserving the information associated with its origin or its handling.

On their upper edge the containers are printed with the days of the week and time, so that at the handling table the operator can know the time and day of the expiration of the food marked during its preparation. The measuring strip in the containers allows the checking of the quantity of the contained liquids.

ABS Food pans and airtight containers

Line of airtight food pans made of ABS, a BPA-free alternative to polycarbonate, providing high impact resistance. The highly transparent blue colour still enables the contents to be seen, to quickly identify foods and their state.

Built-in label to comply with traceability regulations: Reg (CE) n.852/2004 Reg (CE) n.178/2002. The Permanent label enables professional chefs to identify contents and keep information on the food origin, thus helping to comply with Traceability Regulations Reg (EC) 852/2004 and Reg (EC) 178/2002 regarding food

Versality: Smart design enables one container to be used to cover another. It is possible to close one container with another to adapt to the capacity required at any given time. Dual-purpose lid. The lid is also a tray (GN 1/1 and GN 1/2). Just by turning over the lid, it becomes a tray with GastroNorm sizes.

Airtight: Optional Bi-injection lid with a rubber seal to ensure maximum protection of food, even in large containers.

Easy to clean: Rounded edges: The special design avoids the accumulation of food remains and facilitates cleaning.

Measuring scale: Measuring scale and GastroNorm size indicator.

GastroNorm sizes: Products designed and manufactured according to sizes and specifications established in EN 631.1 standard. Select the ARAVEN container in the GastroNorm size that best adapts to the volume of raw food to be preserved. The fuller the container the less oxygen there is inside.

Ergonomic: ergonomic edges make the container easy to handle.

Cold counter ABS food pans

Range of ABS GastroNorm(BPA-FREE) containers with integrated label for displaying food in cold counters.

On the operational side these containers allow “mirroring” of handling/cold counter areas and storage/cold cabinet areas to facilitate prepping, batching, serving, adjustment of a container to the type of food contained and to production or consumption batches.

Cold counter ABS food pans

Built-in label to comply with traceability regulations: Reg (CE) n.852/2004 Reg (CE) n.178/2002. The Permanent label enables professional chefs to identify contents and keep information on the food origin, thus helping to comply with Traceability Regulations Reg (EC) 852/2004 and Reg (EC) 178/2002 regarding food.

Versality: Enables one container to be used to cover another. It is possible to close one container with another to adapt to the capacity required at any given time. Dual-purpose lid. The lid is also a tray (GN 1/1 and GN 1/2). Just by turning over the lid, it becomes a tray with GastroNorm sizes.

Airtight: Bi-injection lid with a rubber seal to ensure maximum protection of food, even in large containers.

Easy to clean: Rounded edges: The special design avoids the accumulation of food remains and facilitates cleaning.

Measuring scale: Measuring scale and GastroNorm size indicator.

Ergonomic: Ergonomic edges make the container easy to handle.

GastroNorm sizes: Products designed and manufactured according to sizes and specifications established in EN 631.1 standard. Select the ARAVEN container in the GastroNorm size that best adapts to the volume of raw food to be preserved. The fuller the container the less oxygen there is inside.

Polycarbonate food pans

The extensive range of ARAVEN polycarbonate food pans.
Wide range of GastroNorm sizes and great variety of capacities to match usual consumption quantities

Glass-effect transparency to quickly identify foods in cold rooms.

Does not stain. The polycarbonate material used has a barrier effect that prevents food colourings or dyes in certain foods or spices (tomato, mustard, turmeric, curry...) from penetrating and staining the container walls.

The optimal performance of this material at very low temperatures means that it can withstand freezing processes. It also withstands high temperatures and can be used in buffet counters, in bain marie....

Which lid system should I choose?

Airtight lid

To preserve protein-rich foods (meat and fish). The tightness of the container prevents air from entering and thus reduces food oxidation.

Contact Lids

To preserve vegetables, use a contact lid rather than an airtight lid to prevent condensation from forming on the container walls.

Contact lid with notch

It protects against ambient exposure, avoiding the risk of external contamination in food display areas (display counters, buffet, hot serving tables ...).

Polycarbonate food pans

Engraved label: allows easy identification of the content and recording of food safety information such as preparation and use by date. We recommend use with the ARAVEN Marker Pen.

Use-by date marking: Stamped into the top opposite edges are the options to mark either a day of the week (Monday to Sunday) or time AM / PM. This is particularly useful for use in cold or ambient counters where strict use by time rules apply.

Airtight Lid: Bi-injection lid with a rubber seal to ensure maximum protection of food, even in large containers.

Measuring scale: Measuring scale and GastroNorm size indicator.

Easy to clean: Rounded edges: The special design avoids the accumulation of food remains and facilitates cleaning.

Ergonomic: Ergonomic edges make the container easy to handle.

GastroNorm sizes: Products designed and manufactured according to sizes and specifications established in EN 631.1 standard. Select the ARAVEN container in the GastroNorm size that best adapts to the volume of raw food to be preserved. The fuller the container the less oxygen there is inside.

Polycarbonate perforated food pans

For the correct preservation of foods that release liquids perforated food pans must be used. They keep exudates separate from the food itself, this way reducing levels of product wastage.

After washing fresh vegetables drain them and dry them quickly using the perforated food pan before preserving or preparing them.

After cooking, drain excess liquid from vegetables/cooked pasta, using the perforated food pan.

After chopping or slicing fresh vegetables or fruit, such as tomatoes for salads on handling tables and before plating, we recommend placing them in a perforated food pan to ensure that the liquids released do not come into contact with the vegetable/fruit, this way slowing down the process of spoilage.

Perforated food pans

Optimum shape The ridged design allows liquids to drain to the base pan much more quickly. This means faster thawing times too. There is sufficient space under the perforated base to ensure that liquids never come into contact with food.

Ergonomic: Ergonomic edges make the container easy to handle.

Easy to clean: Its special design prevents the accumulation of remnants and facilitates cleaning.

GastroNorm sizes: Products designed and manufactured according to dimensions and specifications established in EN 631.1 standard.

Drain trays

GastroNorm drain trays are essential elements in any kitchen where food preservation takes place.

They are used in the preservation of foods that release juices, reducing the amount of losses due to spoilage. Fresh meat and fish release a liquid called residual liquid. It contains nutrients and water that can encourage the proliferation of bacteria, with a resulting potential health hazard.

Correct preservation of this type of food requires the use of drain trays that separate the exudate from the food. The drain trays used for this purpose must be high enough to avoid the exudate flowing over the drain trays and their design must avoid sharp edges, corners and nooks where the exudate can accumulate. The drain tray is placed in the bottom of the container and encourage drainage to the bottom, thus avoiding contact between the liquid and the food and reducing the risk of proliferation of bacteria.

Optimum shape: Designed to correctly evacuate exudates. High enough to separate exudates from food. Complies with hygiene and health regulations that recommend avoiding contact between food and exudates (2 cm).

Rounded edges: A special design that avoids accumulation of food remains and makes cleaning easier.

GastroNorm sizes: Products designed and manufactured according to dimensions and specifications established in EN 631.1 standard.

Ergonomic: An ergonomic edge to facilitate handling of the grille.

Airtight lids

+95°C | +203°F
-40°C | -40°F

The range of ARAVEN bi-injection airtight lids with a rubber seal close the container hermetically and ensure maximum food protection.

The airtight lid prevents food from drying out or absorbing or giving off odours that could affect its quality. Airtight lids guarantee that liquid contents do not spill out of the container during preservation and transport.

GastroNorm Silicone lids

+200°C | +392°F
-40°C | -40°F

ARAVEN's totally airtight silicone lids help keep food fresh for longer.

ARAVEN's totally airtight silicone lids help keep food fresh for longer. Low microbiological load, low levels of oxidation and keeping the texture, aroma and flavor of food are their main advantages.

Thanks to the flexibility of this material these lids are universal and can be used for all types of containers of the same GN size regardless of the material with which they are made. They can be used with polycarbonate, polypropylene, melamine, porcelain, stainless steel, etc. Their transparency allows the food stored inside to be identified.

They are apt for use in ovens at temperatures up to 200°C and are also microwave-safe, reducing cooking costs. Safe for use in a freezer up to -40°C.

Universal contact lids

ARAVEN's universal contact lid covers most GastroNorm food pans in different materials.

Equipped with a handle for easy opening. Airtight containers should not be used to preserve raw vegetables with a high water content, instead use a food pan with a contact lid. Fresh fruit and vegetables have a high water content, this characteristic is crucial for their correct preservation as, over time, they lose moisture which can condense on the walls and at the bottom of the food container, encouraging the growth of mould and speeding up the process of spoilage of vegetables.

Identification system

Savings: Does away with inconvenience and cost of having to replace labels. No need to stick and peel off paper labels.

Easy to use & convenient: A label that provides all the information required by health authorities, just write the information on the label with an ARAVEN marker.

Hygienic: Integrated label; leaves no traces; as good as new after washing in a dishwasher.

HORECA Marker:

Specially designed by ARAVEN to help catering professionals comply with traceability regulations.

To facilitate the use of labelled containers, ARAVEN presents its HORECA marker with permanent water-based ink that can be washed off in a dishwasher. Just write the information on the label and when the container is washed, the writing can be rinsed off with water or will disappear by gently rubbing it under a flow of hot water.

Anti-allergen airtight containers

Identify and separate meals specially prepared for customers with food allergies.

The purple ARAVEN airtight containers are designed to visually separate food for customers with allergies or food intolerances, protecting it from possible contamination that could trigger an allergic reaction.

Fast, fool-proof and safe identification of food with allergens is key in prevention of inadvertent intake by the risk group. The permanent integrated label lists 9 of the most common food allergens, making it easier and faster to record/mark the contents with the ARAVEN Marker Pen.

The special permanent label is to identify the allergen on ARAVEN's airtight container, preserving food with every guarantee for customers who suffer food allergies or intolerances. In addition to the leak proof closure of these airtight containers, they are specially designed to preserve and protect foods from any risk of contagion and cross-contamination by food allergens.

Purpose

Pursuant to the new EU Food Information (Allergens) Regulation 1169/2011 on food information for consumers, it is mandatory to provide information on possible allergens that are present in dishes or products so that consumers know what they can and cannot eat without having to indicate that they have a food allergy or food intolerance and without having to ask for special treatment.

When did it come into force?

From 13 December 2014 all food companies are obliged to provide information on the allergenic ingredients used in food that is sold or supplied. With these new regulations if a consumer suffers an allergic reaction or intolerance the restaurant, that served the food, is responsible and may face fines and sanctions.

What catering establishments are affected by these regulations?

- Serve food, such as bars, restaurants or catering services.
- Sell unpacked foods or food that is packed at the consumer's request (cold meats, bread, ready-prepared food or food that is sold loose).
- Sell or supply unpacked food to other establishments such as schools, hospitals, residences.

How to provide this information?

Information on allergens must be clear, legible and available orally or in writing on a medium such as a menu, board, website, catalogue or a sign near to the food.

What allergens must be indicated?

Milk and products thereof including lactose

Crustaceans and products thereof

Sesame and products thereof

Celery and products thereof

Eggs and products thereof

Soybeans and products thereof

Molluscs and products thereof

Lupin and products thereof

Fish and products thereof

Gluten and products thereof

Sulphur dioxide at concentrations of more than 10 mg/kg

Peanuts and products thereof

Mustard and products thereof

Nuts (almonds, hazelnuts, walnut, pistachios and products thereof)

Perforated food pan. The ridged base is specially designed to ensure the least possible contact area with food.

The perforated base helps the liquid released by food (exudate) during the thawing process to drain off. The thawing process takes less time as the liquid released from foodstuffs, especially meat and fish, drains through the holes without accumulating in the contact area.

Foodstuffs are placed inside the perforated food pan that fits into solid food pan which collects the liquid released from the food, preventing dripping and contamination of other nearby foods during thawing (exudate or glaze/coverage liquid). To prevent contamination food should be protected with a lid.

Ingredient bins

These accessible containers optimize space by using efficient food storage methods, helping to reduce waste and improving stock rotation.

Accessible containers are ideal for storing food with very low levels of humidity (dry pulses, nuts, pasta, rice...) as they can be closed so the contents are protected without having to be airtight, avoiding the humidity getting in and spoiling the contents. All you have to do then is to find a suitable place to store the container, which should be a dry and well-ventilated, away from sources of heat and damp and isolated from very damp environments.

FIFO SYSTEM

Greater stock control

Accessible Container 1/1 is designed with the FIFO system (first in-first out) with a lid for filling and another for removing food. HACCP recommendation. Facilitates correct rotation of food. Separate filling and removing in GN 1/1 to facilitate control of contents.

Ingredient bins

Easy access: You can access the contents of any of the stacked containers without having to unstack them - a very significant advantage to save time and keep everything tidy.
The lid remains raised in an open position without needing to hold it. It can be completely opened even with another container stacked on it and when it is on the shelf. Container height that adapts to the gap between shelves.

Permanent traceability label: Thanks to the Permanent label, kitchen staff can quickly identify the content and easily access all information regarding its origin, which in turn helps ensure compliance with EU food traceability legislation, including Regulations (EC) 852/2004 and 178/2002.

Translucent: The front lid, integrated label and transparency of this product enable the food to be identified at a glance.

ColorClip: Colour coding to avoid cross-contamination of food.

Side handles: Make the boxes easier to handle and move.

GastroNorm: Apt for GastroNorm sizes: GN 1/3, GN 2/3, GN 1/1.

Rounded edges: A special design that avoids accumulation of food remains and facilitates cleaning.

FIFO SYSTEM
Ref. **00918** / 50 L

Ingredient bins

The ingredient bins are designed for perfect storage, optimum food preservation with maximum hygiene and the strictest control of raw materials.

Increased efficiency in handling and storage processes. Large capacity containers specially designed to store dry, non-perishable or bulk foodstuffs that do not require refrigeration, in correct conditions of temperature and humidity.

They facilitate correct transfer and labelling of foodstuffs ensuring correct preservation and reducing the level of waste.

When dry products (legumes, pasta, rice, etc.) are delivered in bulk or in large sacks and transferred to the company's plastic containers, the new container must be marked with the information on the original label (product brand, batch number, opening date and expiration date or best-by date), thereby ensuring the traceability of the raw material.

Tough polyamide **wheels** for the 80L and 100L sizes to facilitate transport.

Permanent traceability label: Allows the origin of the food, its preparation date, expiry date etc. to be recorded.

Ref. **00919** / 80 L

330x150x140 mm

Square containers

The square shape optimises use of space when storing, without any wasted gaps.

For the storage of non-perishable food with low humidity such as legumes, pasta, rice, etc., we recommend the use of containers with closable, not necessarily hermetically sealed, lids, thereby preventing moisture from infiltrating the container and spoiling the food. Side handles on the outside to facilitate handling and transport.

Stackable with lid or nestable inside each other when empty, reducing the space used, easy to remove thanks to the support lines.

Ideal for bulk dry food storage (pulses, pasta, nuts, rice, etc.) Its tight seal allows sauces, creams and other liquids to be properly stored and transported.

Square containers

ColorClip: Colour coded to avoid cross-contamination. ARAVEN containers, thanks to their ColorClip identification, help to prevent cross-contamination, ensuring that the contents of the container is always of the same type: Poultry, red meat, vegetables/fruit or fish.

Side handles: Making them easier to handle and move.

Measuring scale for perfect control of stocks.

Texturized on corners and base to protect from abrasion and impact.

Rounded edges: A special design that avoids accumulation of food remains and facilitates cleaning. Rounded corners make pouring liquids easy.

Stackable with lid **and nestable** when empty.

Water-tight seal: Double seal for total food protection. For a correct seal, press down on the four sides of the lid until you hear a click.

Easy to Open The container has a tab on the lid for easy opening.

Integrated label: The permanent label enables catering professionals to identify the contents and record information relating to its origin.

Other food storage containers

GN egg containers enable eggs to be stored with a lid on, guaranteeing food safety and correct visibility of container contents.

Ref. **70378** · GN 2/3
354x325xh200 mm | + 4 trays
30 eggs per tray

Ref. **73056** · GN 2/3
290x290xh40 mm

Replacing the suppliers' original packaging avoids introducing new sources of contamination into the cold chamber.

In the case of eggs, this practice is especially important as eggs are traditionally the source of transmission of Salmonella (both the egg and the egg boxes), therefore it is a good idea to change the container.

Porous materials such as wood or cardboard are not authorised by regulations for use in cold chambers as they are totally unhygienic, they must be replaced by other materials such as plastic. It is also recommendable to have different rooms for different types of food and to store eggs in the vegetable cold chamber.

Round and square food storage containers

GastroNorm towers for containers

Maximum hygiene, the design allows the food temperature to be lowered quickly by enabling the circulation of cold air around the outside of the food storage container.

GastroNorm food storage container towers, in contrast to stacked containers, allow air to circulate around the containers.

This way food is cooled more quickly and preserved in better conditions, reducing the risk of proliferation of bacteria and reducing energy consumption.

ARAVEN food storage container towers ensure optimum preservation of food containing humidity (fruit and vegetables).

Fresh fruit and vegetables have a high water content. This must be taken into account for correct preservation, as over time they release water that can condense on the walls and accumulate at the bottom of the container, causing food to rot.

To prevent this, the containers used to store this type of food should not be airtight but rather have a ventilation system enabling the elimination of evaporated water so as to avoid condensation.

The structure of the tower acts as a cover for the container, therefore the container does not need an additional lid. This provides the tower with ventilated areas so that the flow of air can cool the food quickly, maintaining it at the correct temperature and avoiding the accumulation of water inside the containers, preventing mould from developing. Additionally, the use of ARAVEN's GastroNorm grilles at the bottom of the container also enables air circulation inside, avoiding water condensation.

ARAVEN GastroNorm towers allow containers with lids to be stored, optimizing storage space.

Maximum use is made of space by allowing vertical storing, increasing storage capacity.

Easy to stack and totally accessible: The stacked container with a lid can be reached without having to take off the top containers. You can remove the airtight container without having to move any other container. Storage spaces are kept tidy, speeding up and facilitating work flow.

Maximum food protection. Designed to house GastroNorm containers with lid.

Versatility. Suitable for the 1/1 and 1/2 GastroNorm airtight container range, 100 mm height, as well as stainless steel containers with lid.

GastroNorm trolley. Safety latch is provided for containers placed in the GastroNorm tower, which can be fitted with wheels for transport.

GastroNorm towers for containers

Enhanced food accessibility: The food storage containers act as pull-out drawers allowing easy access to contents.

GastroNorm: Apt for GastroNorm sizes. Enables GN 1/1 and GN 1/2 containers to be placed inside, 100 mm high.

Integrated label: To comply with traceability regulations: Reg. (EC) n.852/2004 and Reg. (EC) n.178/2002. Eliminates the awkward and costly need to replace the label as you no longer have to stick and unstick paper labels.

Easy to assemble and dismantle for cleaning: No tools are needed.

Equipped with a safety latch.

Optimization of space in different locations: The tower can be adapted to the space available between shelves. Wheels can be fitted to turn it into a trolley.

Recommended load

The wheels to fit GastroNorm Storage Container Towers raise the tray 10cm above floor level, thus allowing access underneath for cleaning.

Organize the cold room correctly

Correct organisation of the cold room, with food located correctly according to type and nature, will comply not only with the target of improving productivity in the kitchen, but will also reduce health and hygiene hazards.

Cross-contamination is a process by which food comes into contact with other substances, generally harmful for health.

Avoid cross-contamination. To avoid cross-contamination it is essential to always separate cooked food or ready to eat food, and whenever possible, establish areas according to types of food in separate cold rooms. If stored in the same room, containers with the raw food should be kept at the bottom, to avoid any possible dripping to prepared, ready to eat food. Always remember to use airtight containers to preserve freshness for longer and prevent cross contamination.

Non-perishable food can be stored at ambient temperature, in large capacity containers with lids (e.g. dry pulses, pasta, canned products, cereals, etc.), needing no special conditions for storage, just a cool, dry and well-ventilated location.

Cold rooms should be at temperature of between 0° and 8°C, depending on the type of product. Ideal refrigerating temperatures are between 0 °C and +4 °C, but a cold room in which various products are stored should kept at the temperature of the product that requires the coldest temperature.

Freezer chambers must be at a temperature of below -18 °C.

Organize the cold room correctly

Correct organisation of cold storage/freezer helps lessen any hygiene and health risks as well as improving productivity in the kitchen, and implementing an HACCP and efficient management system.

Top shelves. Containers with prepared, ready to eat food must be covered and placed on upper shelves. This prevents potential cross contamination from food scraps falling on another food product that has already undergone thermal processing. If scraps of a prepared food product were to fall on top of a raw food product, however, the bacteria would be eliminated when the raw product undergoes thermal processing, thus reducing the risk of contamination.

Middle shelves. Raw meat and fish should be placed on the middle shelves of cold rooms.

Bottom shelves. Raw fruit and vegetables for cooking, roasting, steaming can be placed on the lower shelves.

Fruit and vegetables for consumption in raw state, like lettuce, tomatoes, carrots etc, must be stored in a separate area to eliminate risk of cross contamination. If space is an issue, always keep raw eating vegetables properly covered and protected on top shelves.

Measures that must be taken into account in storage rooms

1. The interior of the storage rooms must be clean and dry.
2. The capacity of the storage should not be exceeded.
3. Properly separate the foods to facilitate the circulation of air.
4. Record the temperature of the storage rooms to ensure their proper operation.
5. Identify the products with labels that indicate their name, origin, entry date into the storage, weight, etc.
6. Do not leave food containers resting directly on the ground.

Under shelf support

+70°C | +158°F
-40°C | -40°F

Under shelf support for shelving creates a new additional food storage housing.

It can be located anywhere along the shelf, adapting to any GN measurement. The guide rails allow you to easily remove containers while keeping them flat, eliminating the need to stack containers.

Extendable shelving

ARAVEN extendable shelving with telescopic shelf rails cover different sizes ranging from 89cm to 180cm.

The main advantage of the system is that the shelving adapts to the space available with no need for made to measure solution – optimising your space and reducing costs.

The easy to assemble and dismantle system is supplied flat packed for easy storage and transportation. No assembly tools are required.

Handling

All equipment and utensils used in food handling areas that may come into contact with food must be made of materials that do not transmit toxic substances, odors or tastes; it must be impervious, corrosion-resistant and able to withstand repeated cleaning and disinfecting cycles. The surfaces must be smooth, without dents or cracks.

ARAVEN's products help catering establishments comply with Correct Hygiene practices, encouraging prevention, reduction or elimination of possible hazards in the different phases of food preparation and handling.

They have been designed to reduce, as much as possible, the risk of food contamination. In addition, these work tools that come into contact with food are manufactured with materials that are resistant to corrosion and easy to clean and disinfect.

Special care must be taken when handling meat and fish to ensure they remain outside the temperature danger zone (8 °C/46 °F to 65 °C/149 °F).

They must be kept cold or be cooked as soon as possible. Avoid working with meat and fish in excessively hot environments.

Always separate raw food from cooked food and from food that has been cleaned and is ready to be eaten raw.

Raw food work zones should always be separate from cooked and pre-cooked food work zones.

Use different kitchen utensils (forks, knives, plates, chopping boards, etc.) to work with raw foods. Using different chopping boards for each food type prevents cross contamination.

ARAVEN's chopping boards with different coloured corners identify the type of food for which they are used. These fixed coloured corners identify chopping surfaces according to food groups to prevent cross contamination.

Non-slip cutting boards

Dairy

Red meat

Fish

Poultry

Vegetables

Prepared meat

Anti-allergic

ARAVEN cutting boards are fundamental in the implementation of HACCP systems in handling processes, ensuring that the cutting, filleting, etc. processes are always carried out with the same type of product: Meat, fish, vegetables, dairy products, cured sausage products.

When in use, cutting boards, either through wear or due to other causes, often do not rest correctly on work surfaces and food handlers place cloths or other items under them, which end up being a source of contamination because of food liquids.

An ARAVEN cutting board sits firmly on the work surface thanks to its permanent corners made of injected rubber. These supports stop the board from sliding on the work surface, providing greater safety in the work processes. Work surfaces in direct contact with food must be solid, durable and easy to clean, maintain and disinfect. They must

be made of smooth, non-absorbent and non-toxic material, inert to food, detergents and disinfectants used in normal working conditions.

The use of wood and other materials that cannot be properly cleaned and disinfected should be avoided, unless you are certain that their use will not be a source of contamination.

ARAVEN cutting boards are made of high-density PE, a plastic material highly resistant to corrosion and that impedes the passage of moisture. Its surface is white, which does not conceal dirt, as occurs in the case of colored boards.

Patented

Non-slip cutting boards

Color coding: The colored corner of the board identifies the type of food to be handled. ARAVEN cutting boards have permanent colored corners that enable the work surfaces to be identified according to the groups of food to be handled, thus avoiding cross-contamination. This differentiation is especially important to distinguish between raw and prepared food.

Permanent injected corners: includes non-detachable rubber corners. The rubber corner pieces are permanently bonded to the PE body.

Non-slip supports, safety at work: The board does not slide, thus providing maximum safety when cutting. No need to use a cloth under the board to stop it sliding, eliminating a possible source of contamination.

Reversible: Both sides are useable, prolonging the useful life of the cutting board.

Hygiene: A clean colour that does not conceal dirt, as occurs when using coloured boards. Can be washed in a dishwasher.

Tidiness: The boards can be stored vertically without any additional rack.

Sauce dispensers

+95°C | +203°F
-40°C | -40°F

Popular for storage and dispensing of sauces, dressings, syrups...

Easy to fill - reduce waste levels by pumping out only the amount required.

Optimization of space: Take up very little space and can be kept in the kitchen or made available directly to consumers.

Suitable for front of the house self-service areas. Enhance the presentation of sauces in serving and display areas. Available with organisers useful for carrying the dispensers to their storage place.

Dismantlable for cleaning

Sauce dispensers

Vertical dispenser: Greater user convenience, no accidental spills.

Shutoff valve keeps the pumping circuit closed, improving preservation of product in the container, even in cold storage.

Double airtight seal for total protection of the food. The lid is made of LDPE, a more flexible material, which allows a better fit to the base.

Measuring scale for perfect control of stocks.

ColorClip: Colour coding to avoid cross-contamination. ARAVEN containers, thanks to their ColorClip identification, help to prevent cross-contamination, ensuring that the contents of the container are always of the same type: Poultry, red meat, vegetables/fruit or fish.

Integrated label: The permanent label enables catering professionals to identify the contents and record information relating to its origin, thus contributing to compliance with Traceability Regulations Reg. (EC) 852/2004 and Reg. (EC) 178/2002 regarding food.

GastroNorm sizes: Products designed and manufactured according to dimensions and specifications established in the EN 631.1 standard.

Containers & deep trays without lid

+95°C | +203°F
-40°C | -40°F

+90°C | +194°F
-40°C | -40°F

Containers without lids for use in handling processes. They are made of polyethylene which is highly resistant to impacts and has an optimal behaviour at low temperatures. The extra thickness of the containers makes them highly robust and endows them with excellent mechanical behaviour.

It is recommended for food to be thawed without its original packaging - the ARAVEN containers will help to speed up the thawing process.

To prevent cross contamination from the liquid released during defrosting, the use of a drain tray is recommended so that you can separate the liquid from the food product.

During defrosting, food must be placed on a drip tray at a height that ensures that the liquid does not come into contact with the food product, as the liquid contains humidity and nutrients that speed up the formation of bacteria that spoil food products.

Our grills should be used to ensure that residual liquids are kept separate from the thawing food. This will prevent growth of bacteria, cross contamination and food spoilage.

Containers & deep trays without lid

Optimal shape: Design and height that allow correct drainage and compliance with the hygiene-health regulations to prevent food cross contamination.

Rounded edges: Special design that avoids the accumulation of food remains; easier to clean.

Ergonomics: Their ergonomic edges make handling easier. The deep containers have side handles.

Round silicone lids

The lid material is extremely flexible which means that it adapts to different surfaces and materials.

ARAVEN round silicone lids allow food to be preserved with all the necessary food hygiene guarantees. Thanks to their vacuum effect, air can be partially removed from the container for better food protection, prolonging the useful life of food. The lid is stretched tight, meaning that containers can be stacked.

The lid can be used to cover all types of containers: bowls, pans, plates, etc. in polypropylene, polycarbonate, steel, porcelain, glass... The lid adjusts to the rim of the bowl, pan, etc., providing tight fit. It can be used for cooking, heating up or defrosting in a conventional oven or a microwave oven. Temperature resistant up to 200°C/392°F, it can help to reduce cooking times and allowing energy savings.

Serving and display

ARAVEN offers a wide range of products for serving and displaying food. Great care has been taken with the design and functionality in order to satisfy the expectations of both serving and kitchen staff. ARAVEN trays can be used for any type of food as they come in different capacities with a great variety of sizes and finishes:

- High-shine, high-transparency display trays for an excellent presentation of foods.
- Strong, robust serving trays designed for quick, easy cleaning.
- GastroNorm display trays and display cases to optimize space.
- Reusable catering ware with a modern, innovative, attractive design. These items have an excellent aesthetic appearance in line with the very latest cuisine trends in the catering sector.
- Our Polycarbonate glasses and jugs: unbreakable, high shine, transparent and very light; are reusable, durable and recommended for outdoor use - patios, gardens, pool areas as well as for catering for groups. Customisation service with client logo is available subject to minimum order quantity.

Protect all processed foods from environmental exposure until the time of their consumption. The application of a

thermal treatment to a food does not guarantee that there will be no subsequent contamination.

- Keep the processed foods at a temperature equal to or higher than 65 °C / 149 °F. Check the temperature regularly.
- The time spent in heated storage must not exceed 3 hours.
- If the temperature of the heated storage system is less than 65°C / 149°F, the processed foods must be reheated at a temperature higher than 75°C / 167°F and the equipment must be reviewed.
- It is recommended to use lids or items that avoid spillages of the processed foods into the isothermal storage equipment/containers, which may cause a subsequent contamination.
- The time that the processed products that are going to be consumed cold and are stored at room temperature must be minimised (maximum of 30 minutes).

Maintain the cold chain of processed foods until they are cooked, reheated, or served.

5 Compartment food tray

+95°C | +203°F
-40°C | -40°F

+99°C | +99°F
-40°C | -40°F

The serving tray has spaces for different foods so there is no need for plates.

Five compartments: two large ones for main dishes, two small ones for dessert, fruit, bread, a glass... with a rectangular space in the centre for cutlery.

Food compartments have notches to rest the cutlery on while in use and to stop them from sliding into the spaces.

The side grips on the tray makes it easy to hold and carry, even for children. Indeed, the tray containing food can be covered by an empty inverted tray to protect the food until it is ready to be eaten.

Serving and display trays

Trays to suit every need

ARAVEN serving trays are made of polypropylene, a highly resistant material which makes them ideal for quick-service, self-service restaurants and group catering services.

These trays have a textured surface to prevent the contents from sliding. They are nestable with support points which allow air to circulate between the trays when stacked for speedy drying.

ARAVEN flat, deep and display tray range offers great variety of sizes and finishes suitable for any food display needs. They are made in SAN, a very transparent material - rigid but more fragile than the rest of materials. When not coloured it has high visibility and shine. Adding colouring agent provides the high-profile finish essential for food display purposes. It is rigid, although it is more fragile than the other materials. This range of products is perfect for displaying any type of food product and is available in a wide variety of sizes and finishes.

Diswasher safe - all the trays are designed with round edges to make cleaning easier.

Fast Food

Trays are nestable and have support points that **allow air to circulate between the trays** when stacked, which helps them to dry correctly. Trays have a textured Surface to **prevent** the contents from **sliding**. **Customizable with silk-screen printing.**

Plate cover

In self-service establishments food on display must be protected from direct contamination that could possibly derive from the proximity or actions of consumers.

ARAVEN's polypropylene or polycarbonate plate cover is unbreakable and protects food from possible external contamination by covering food until it is served. Furthermore, several plates can be stacked to optimize kitchen space until food is served. ARAVEN plate covers allow food to be kept hot until it is served. The plate cover has a centre hole to prevent condensation and to facilitate opening. High transparency means that food can be seen at a glance.

Five models to adapt to different plate contours: Ø 215 to Ø 315.

Catering ware

Modern, innovative and highly attractive catering ware ... these are the key features of the NATURE and WAVE Catering system by ARAVEN. Products with a carefully-studied design and excellent aesthetic finish in line with the very latest cuisine trends in the catering sector.

Made of high-density polystyrene (PS). 100% recyclable; material with an excellent aspect, shine and surface finish characteristic of a top-class catering service.

The range is presented in three colour proposals: transparent, white and black. Each piece achieves a perfect balance with the food it displays offering an impeccable presentation that will highlight the originality of the most avant-garde culinary creations.

Suitably dimensioned to taste food in one or two mouthfuls; their rounded shapes allow access to all of their contents.

ERGONOMIC AND VERSATILE

The items in the range offer numerous possibilities for combining colors and shapes (glass fits on to plate so that both can be held in one hand. Small flat plate with deep flat plate...).

Easy stacking to optimize empty spaces, in whole product family.

Tumblers and pitchers

Perfect for collective use in festivals, swimming pools and tourist accommodation establishments where the use of unbreakable tableware is recommended.

ARAVEN's tumblers come in a wide range of capacities. Unbreakable, transparent, easy to handle. They are reusable, minimising the impact on the environment due to less waste compared to disposable tumblers. Unbreakable – glass free and safer for public areas use. Their design is in line with the latest trends for catering tableware with a visual effect similar to glass.

Customization

ARAVEN tumblers can be customized by screenprinting or engraving. There is also the possibility of combining customized engraved designs with screen-printing.

Stackable Pitchers

Practical, safe solutions for serving drinks

ARAVEN's stackable pitchers are nestable without a lid to optimise storage space when not in use. In addition to protecting contents from external contamination, the exclusive lid design has two positions to allow the pitcher to be: opened with a mesh to prevent solids such as ice cubes or fruit from splashing when pouring liquids.

Textured interior for easy grip that protects from high temperatures

Service cart and accessories

Setting the tables is one of the key aspects of service at restaurants.

The dining room is the place where diners are going to spend most time during their visit to the restaurant so it is very important to take care of every last detail. There are two parts to the task of setting tables at a restaurant: preparation/checking all of the items and then the actual process of setting the tables. Normally these tasks are done at the same time and using a serving trolley to assist saves a great deal of time because dining room staff do not have to move around as much as all that they need is on hand. Another of the advantages of serving trolleys is that they prevent workplace accidents because staff do not have to carry heavy items such as dishes or cutlery.

A serving trolley is not only very useful for setting tables. Its versatility means that it is also of great use for clearing tables and for logistics tasks, such as the reception and distribution of goods, transporting items within the establishment or as a waiter's trolley for room service.

Accessories

Black containers for table waste, dirty utensils, transport cutlery or to collect dishes and glasses.

When clearing tables the black colour conceals waste in containers from diners. ARAVEN recommends using either grey or black containers for this purpose to distinguish them from the white or clear containers used in the kitchen. This way we can differentiate the containers for setting or clearing tables in the dining room from those that are in contact with food, adhering to optimal health and hygiene standards.

The black container for waste and the container for dirty cutlery can be placed on the four outer sides of the trolley to empty the contents of plates into them.

Transport

The cold chain, a key element in food safety. The cold chain is a series of steps that have to be taken after the food cooling or freezing process to ensure food reaches the consumer in a safe condition. It includes a set of elements and activities necessary to guarantee food quality and safety, from the point of origin to its final consumption.

Objective: To protect food, preserving it at the correct temperature during transport, in order to avoid multiplication of microorganisms that could affect the quality and safety of the products.

Fresh products
6°C

A loss of the optimum cooling or freezing temperature at any of the stages will affect the safety and quality of food. When food has to reach its destination at serving temperature (65°), it can be transported hot. In this case it will be important to keep the food at the same temperature with the minimum temperature fluctuation during its commercial life. Transport will be in vehicles or special means equipped to maintain the temperature of the product with the minimum variation.

Insulated food transport containers GastroNorm

Transport of prepared or pre-prepared products with absolute control of the cold or hot chain.

Transport of prepared or pre-prepared products: guaranteeing maintenance of optimum temperature conditions during transport.

ARAVEN insulated food transport containers are light and tough, protecting the food from temperature changes and guaranteeing an absolute control of cold and hot chains.

1h ↓ **2°** **Keeping food hot:** Temperature drops 2°C every one hour.

1h ↑ **0,5°** **Keeping food cold:** Temperature increases 0.5° every one hour.

Optimization of space

Stacking between modules with lid.

Optimization of space when stored empty

Twofold accessibility: Top and front opening, allowing maximum accessibility, convenience and speed when loading and unloading. **Fold down front door** even with several stacked containers. **Easy stacking.** Side handles. Side grip areas.

Can be dismantled for easy cleaning in a dishwasher. Side housing for transport straps. Inside guides and housing for GastroNorm food storage containers.

Cleaning

In the kitchen the rubbish bin can be a possible source of contamination and proliferation of bacteria.

To avoid food safety hazards in the workplace where food is handled, rubbish bins with non-manual opening lids must be used. They must be located in areas especially designed for the purpose, avoiding contact with food products. Waster containers must be built of tough materials, easy to clean and to disinfect to guarantee the required state of hygiene.

ARAVEN's bins are fundamental allies in the implementation of HACCP systems in cleaning processes. A pedal-operated lid enables you to deposit rubbish without touching the bin

with your hands, helping to prevent contamination of other work areas or food handled afterwards. In addition, the rubbish bin is made of tough material and can be cleaned and disinfected if necessary, to maintain the waster disposal area correctly and preventing any proliferation of bacteria.

ARAVEN has specific bins for every type of waste so that rubbish can be sorted for eco friendly disposal in accordance with EU regulations to this effect. ARAVEN's range of rubbish bins covers 22 litre to 120 litre capacities, adapting to needs, according to the volume of waste generated by kitchen activities.

Recycled bins

Bins manufactured from the waste plastic generated by our production processes. The waste plastic generated in our factories is 100% recycled and turned into new products without losing any of its properties. This action allows us to minimise environmental pollution.

Recovery and processing of the waste plastic from our production

Manufactured by reusing 100% waste plastic

We create new products from 100% recycled material

Waste bins

Reinforced, robust plastic pedal: eliminates the risk of contact with the waste inside when opening and closing the bin.

Total accessibility. The lid opens right back folding neatly behind the bin making emptying easy.

Bins with **large rubber wheels**, making them easier to transport.

Ergonomic handle for easy manipulation.

Colour-coding for selective waste collection and **recycling**.

Made of high-density polyethylene (HDPE) to **guarantee strength**.
